

**NCX**  
NATIONAL CARRIER EXCHANGE

***FOR IMMEDIATE RELEASE:***

**NCX Exhibits at the 2016 Port Tech Expo**

**March 10, 2016 – San Pedro, CA**

The National Carrier Exchange (NCX), [www.NationalCarrierExchange.com](http://www.NationalCarrierExchange.com) was invited to exhibit the 6th Annual Port Tech Expo, which featured entrepreneurs, strategic partners and investors who accelerate innovation, advance clean technologies and create economic opportunities.

At the Expo, NCX demonstrated its software platform for Motor Carriers in the Trucking Industry. The NCX Platform is a comprehensive Web-Based Tracking, Dispatch and Operations system for Fleet Dispatchers to schedule, monitor, and confirm the progress of every load from pickup to delivery. NCX allows Carriers to more efficiently manage and operate their fleets of trucks and drivers. It was a perfect fit for the Expo this year with its focus on Clean Tech Start-ups.

**Co-Founder Darrell Benvenuto** - "Hearing other entrepreneurs in the logistics space highlight the many challenges facing Carriers, we're delighted to offer our platform out to every Carrier in the country for free, to finally put a powerful set of world-class tracking and management tools in their hands – at a price they can afford. We're excited to provide the only solution in its class with a rich tool set and an all-encompassing dispatch management solution that is absolutely free."

**About NCX:** NCX provides Motor Carrier Dispatchers with a free, comprehensive Fleet Tracking, Dispatch, Management, and Operations platform. The platform enables Carriers to avoid wasting money on GPS tracking equipment, software and licenses, as well as increase their efficiency with free real-time tracking and live mapping of all their trucks 24/7, 365 days a year. Its Fleet-wide Live Dispatch Map allows Dispatchers to be constantly aware of the location of every one of their trucks across the country, and to monitor shipments every step of the way from pickup to delivery. Its detailed Load Calendar lets them schedule and assign work to all of their drivers with the click of a button. Carriers can even send free Tracking Numbers to their clients, providing them true Location Awareness of their cargo and the ability to monitor the truck's progress live, on a map.

**About Port Tech:** Port Tech ([www.porttechla.org](http://www.porttechla.org)) is a 501(c)(3) non-profit organization and a cooperative effort of the City of Los Angeles, the Ports of Los Angeles & Long Beach, and Harbor Area business communities. They are an innovation and commercialization center dedicated to creating sustainable businesses for ports and the goods movement industry. We bring together entrepreneurs, strategic partners and investors to accelerate innovation, advance clean technologies and create economic opportunities. We promote and support the development of technologies that enable enterprises to meet their environmental, energy, safety/security and transportation goals.
